

Thank you very much for purchasing the FUNcube Dongle Pro+!

For the latest documentation and software, please consult the FUNcube Dongle website: <http://www.funcubedongle.com>

The FUNcube Dongle Pro+ (FCD+) is a plug and play USB software-defined radio (SDR) that is compatible with many operating systems and software. Typically, any SDR software that is soundcard compatible will work with the FCD+.

If you're a newcomer, we recommend running SDR Sharp (<http://sdrsharp.com>) in Windows as a good starting point. In addition, because the FUNcube Dongle is frequency-agile, you'll need to use the special FCD+ frequency control applet that is downloadable from the FUNcube Dongle website.

Remember to keep an eye on the site for upgraded firmware. The firmware shipped is extremely stable, however we're always looking for improvements. With SDR technology there's plenty of tweaking that can be done.

Please note also that a proportion of the purchase price goes to supporting AMSAT-UK and the FUNcube satellite project.

Many thanks again,

Howard

WEEE Disposal Information

At the end of its serviceable life, this product should not be treated as household or general waste. It should be handed over to the applicable collection point for the recycling of electrical and electronic equipment, or collected separately as prescribed by the local laws and regulations.
